MC Longsword Vol.2

Updated Feb 16th 2026

Product Overview

Thank you for purchasing a MoCap Central animation pack! We take pride in capturing and processing our data to the highest quality by adding details such as finger motion and ensuring smooth start/end poses. All clips use the Unity Mecanim Humanoid system so the animations play back on any Unity Humanoid compatible character.

MC Unity Character

The **rig_MCUnity** character contains a Unity compatible skeleton with fingers, eye and jaw bones. Its Rig > Animation Type is set to Humanoid.

Demo Scenes

The package includes a demo scene **Scene_Demo_MAIN** file to review the animation clips. You can also view the animated objects such as the chair being moved by the character.

Demo Timeline

Animations have been added to a single Timeline in Scene_Demo_Main. Open the Timeline editor Window > Sequencing > Timeline. Select the Timeline_AllAnims in the scene Hierarchy and hit play in the Timeline window.

Props

A character prefab exists with the scabbard and sword prop already attached to the character, see the Scene_Demo_MAIN.

- The sword prop can be attached to the weapon_r bone, this bone is animated
- The scabbard prop can be attached to the scabbard_sword bone which also has animation data.

Objects

Objects are available in the Demo > Objects folder

Root Bone

The animations use the 'root' bone to ensure easy alignment of the character.
